

Prostate Cancer C-o-n-n-e-c-t-i-o-n-s

Webinar Series

These are certainly strange times, and the need to connect with others is more important than ever, especially for men who are affected by prostate cancer and their loved ones. While living with restrictions related to COVID, these men and women are still dealing with important treatment decisions or management of side effects associated with prostate cancer treatment. Us TOO and AnCan are proud to offer **Prostate Cancer Connections**, a series of educational and interactive webinars which will bring people together virtually and safely to access empowering, decision-making information and personal connections in a time of social distancing.

For the second of our three webinars, we offer a discussion around *genetics, genomics and prostate cancer*. About this exciting emerging topic, participant Katie Stoll states, "Genetic testing technology is changing rapidly and there are a growing number of genetic testing options available. We're here to help you sort through the wealth of information in this new age of genetics. Our goal is to provide objective expertise and latest developments."

Prostate Cancer Connections, Episode 2:
Genetics, Genomics and Prostate Cancer Webinar
Presented by Us TOO International and AnCan
